ABOUT SCALEHUB

ScaleHub GmbH is an innovative company specializing in the development and delivery of **managed services in the field of data integration and processing**. ScaleHub also leverages crowdsourcing approaches to enable the efficient aggregation, analysis, and transformation of data. The company's tailored, AI-based software solutions help clients automate their business processes and advance their digital transformation. Through the use of state-of-the-art technologies and the integration of crowdsourcing, ScaleHub helps optimize workflows and increase efficiency across a wide range of industries.

We are looking to strengthen our consulting team.

Your Role

You enjoy working at the interfaces: between IT architecture and business processes, between security requirements and practical implementation, between client expectations and robust concepts. We are looking for a consultant who does not merely describe client solutions but actively helps shape them – from the target vision to concrete implementation.

We deliberately address both experienced **Senior Consultants** who take on responsibility in complex environments, as well as consultants and **career changers** with a strong interest in developing their skills in consulting in a structured way.

Your Way of Working

If you want to create clarity in your consulting work – through clean analyses, transparent architecture decisions, and understandable concepts – then you have come to the right place. We believe that seniority should take effect through creative freedom, independent decisions, and responsibility, and we actively support personal development through learning on real projects, challenging tasks, and clear feedback loops.

Your Responsibilities

You take on responsibility in projects with German- and English-speaking clients and support solutions throughout their entire lifecycle:

- ✔ Implementation and further development of managed services and crowdsourcing solutions for a variety of client scenarios
- ✔ Technical implementation and support of on-premise deployments for mailroom / inbound processing solutions
- ✔ Analysis of business and technical requirements as well as the creation of solution concepts
- ✔ Configuration, documentation, and customization of standard software to client-specific requirements
- ✔ Design and development of custom software solutions to implement client-specific requirements
- ✔ Creation of functional and technical concepts as well as project-relevant documentation
- ✔ Advising clients on business and technical questions regarding the implementation of tailored client solutions
- ✔ Creating training materials and delivering training sessions in German and English for various target groups in the area of mailroom / inbound processing solutions

Your Profile

- ✔ University degree or comparable professional qualification
- ✔ Several years of professional experience in IT consulting (also possible as a junior with a suitable profile)
- ✔ Expert-level or very good knowledge of cloud technologies, managed services, and AI or IT security – with a broad perspective on market developments around private/public cloud solutions; certifications are welcome
- ✔ Experience in analyzing and evaluating IT landscapes as well as designing new IT architectures, including the development of integration concepts
- ✔ Good knowledge of database technologies (Microsoft SQL Server, PostgreSQL) and containerization (Kubernetes, Docker)
- ✔ Sound knowledge of regulatory frameworks, in particular ISO 2700X, GDPR, and GDPdU (German principles for data access), as well as practical data security
- ✔ Strong analytical and conceptual skills as well as a client-centric working style
- ✔ Strong communication skills in German and English – both in writing and in direct exchange with clients
- ✔ Willingness to travel to client sites
- ✔ A plus: experience working with (scanning) process service providers and shared service center organizations in financial services or statutory/private insurance

At a Glance

The key criteria for this position at a glance:

Must-have criteria

- Analytical and conceptual skills
- Professional experience in IT consulting
- Design of new IT architectures incl. integration concepts
- Expert knowledge of cloud technologies
- Strong communication skills in German and English
- Willingness to travel to client sites

Nice-to-have criteria
